Hughes 4500 S-band Terminal

Date: **August 12, 2021**
Release: **5.4.1.3**
Importance: **Mandatory**

Software version 5.4.1.3 for the Hughes 4500 terminal is a mandatory upgrade with security enhancements for remote management.

The file name of the new SW release package for upgrade through the WebUI is **hughes_4500_5.4.1.3.hif**. Alternatively, the SW can be installed in boot mode with the SW Uploader package **4500_Uploader_5.4.1.3.zip**.

Updates in 5.4.1.3 (since 5.3.2.0)

- Remote management enhancements:
    - Change to HTTPS for improved security
    - Remote management access port number is now configurable
- RESTful API updated to be compatible with the Interface Control Document (ICD) version 4.
- Fixed a bug that prevented SW upgrade from remote server when no user connections are active.

Known Issues:

- The terminal will accept IP address requests from connected TEs if they are valid and non-conflicting IP addresses on the subnet, even though they are outside of the specified DHCP range. This is per design of the DHCP server implementation.
