

# Hughes 4500 S-band Terminal

Date: **January 18, 2021**  
Release: **5.3.2.0**  
Importance: **Mandatory**

Software version 5.3.2.0 for the Hughes 4500 terminal is a mandatory upgrade with updated beam information for the enhanced Echostar Mobile coverage area.

The file name of the new SW release package for upgrade through the WebUI is **eml\_4500\_5.3.2.0.hif**.  
Alternatively, the SW can be installed in boot mode with the SW Uploader package **4500\_Uploader\_5.3.2.0.zip**.

## Updates in 5.3.2.0 (since 5.2.3.4)

- Maintenance release with updated beam information for the enhanced Echostar Mobile coverage area.
- Updated WebUI with restructured Connection and Support pages to make access to subpages more user friendly.
- Bug fix for missed incoming calls while in GRA\_PCH (Idle) when a SIM card with 14 digit IMSI is being used.
- RESTful API updated to be compatible with the Interface Control Document (ICD) version 3.

## Known Issues:

- The terminal will accept IP address requests from connected TEs if they are valid and non-conflicting IP addresses on the subnet, even though they are outside of the specified DHCP range. This is per design of the DHCP server implementation.
