

Looking for an SD-WAN solution that actually measures up to fit all of your business needs?

Hughes will work with you to assess requirements and deliver a SD-WAN solution tailored specifically for your unique business.

REAL-TIME APPS

Don't put your business on hold because your network can't prioritize real-time apps.

Our tailor-fit SD-WAN approach drives the performance you want with Intelligent path control, real-time prioritization, delivering a better overall user experience.

AGILITY AND FLEXIBILITY

Spin up new environments. Run different configs at different sites.

The rate of change in technology and customer behavior has never been faster. With Hughes SD-WAN, your network is a flexible network, ready for whatever comes next. Ramp up cloud usage, scale bandwidth, or optimize app performance.

SECURITY

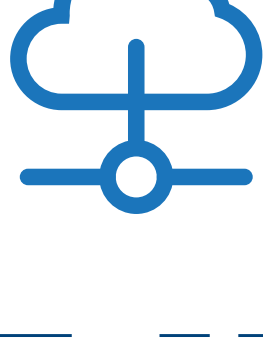

Keep threat actors at bay without slowing down your team.

From Cloud-based to NOC-based to on-premises and hybrid models in between, we will work with you to find the right security model for your specific needs, not merely check a box.

CLOUD ACCESS

Is your network Cloud-based or edge-based? Reach new heights?

From Cloud acceleration to WAN optimization, our tailor-fit SD-WAN approach drives the performance you want for the critical business applications you need to thrive.

BANDWIDTH AND COSTS

There's a bit more to it than just the megabits you're paying for. Great networks can come with great savings, if they're the right size.

When comparing SD-WAN solutions, both underlay and overlay cost must be addressed. We will help you choose the right SD-WAN solution for your unique business needs, and having it tailored to your specific business practices.

ANALYTICS AND VISIBILITY

Drift and differentiation in technology profiles across multiple sites makes it difficult to understand the overall technology portfolio and performance.

With AI-driven operational tools, we deliver single pane-of-glass visibility across every layer of a network selected specifically for your needs.

SERVICES

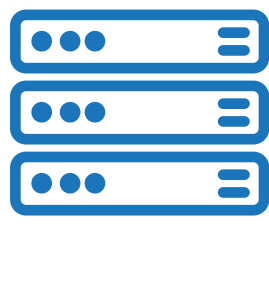

Fully managed? DIY? Think carefully about the support you need.

Networks are growing more complex to administer and more difficult to manage. We manage everything that makes your network deliver exactly the experience you want, now and in the future.

PARTNERSHIP STACK

Have third-party equipment you need to keep? Find a solution that plays nicely with your stack.

Sometimes you like what you have. At least for part of your technology stack. We offer a wide range of SD-WAN solutions from best-in-class vendors, backed by the expertise to find the right solution for your specific needs.

What Makes Us The Leader

50,000
Hughes managed SD-WAN sites in service

3,400
Largest single customer SD-WAN deployment

"The Sweet Spot of Managed SD-WAN"
- GlobalData

#2 Managed SD-WAN Market Share
- Vertical System Group

SD-WAN Market Leader
- Featured Customers

SD-WAN Drives Business Success

Challenge	Action	Result	
Retail	Digital transformation greatly limited by T1 MPLS network	Dual-broadband secure SD-WAN connecting 900+ stores to dual data centers	Significant cost savings with added dynamic QoS needed for video and real-time applications
Financial Services	Merger-driven network consolidation, aggressive digitization of branch apps, including VoIP	Dual SD-WAN, diverse broadband transports to 1,600+ sites	Hughes SD-WAN carrying 2.4M+ calls per week and improved application
Quick Serve Restaurant	Improve security, apply PCI standard, reduce cost, and Cloud enablement	Diverse mix of wired, wireless access to 3,400+ sites	Network resiliency, security and PCI compliance with integrated QoS and VoIP, for a lower cost
