

Hughes GEO & LEO Managed Satellite Service for Enterprise

Connecting your Business Wherever You Do Business

Whether for a restaurant, convenience store, or some other retail location, businesses need high-speed connectivity to support their applications. But what if you have locations beyond the reach of cable? Or where DSL and T1 lines are too slow? Even in today's online digital world, there remain thousands of businesses in areas without access to cost-effective landline options. Hughes Managed Satellite Service solves this challenge.

Satellite Connectivity for your Primary, Backup and Fast Deployment Needs

Hughes provides secure, high-speed internet connectivity over the JUPITER™ High-Throughput Satellite fleet – the largest Ka-band fleet across the Americas – as well as over the OneWeb Low Earth Orbit (LEO) system, as both an authorized distributor (in select markets) and an engineering partner. Satellite connectivity can be configured to provide true path diversity – ideal for redundancy in times of emergency as well as optimized traffic based on criteria such as cost, speed and latency. With satellite solutions, you can connect new locations quickly and efficiently – long before a cable or telecom company could run lines to your site.

Faster Speeds, More Data for your Applications

Hughes Managed Satellite Service is part of the comprehensive suite of HughesON™ Managed Network Services. These services deliver end-to-end, secure solutions regardless of location, and employ the most cost-effective mix of landline, wireless, and satellite transport technologies; all from a world leader in broadband networking.

Hughes Managed Satellite Service enables your critical applications:

- Fast point-of-sale transactions
- Quick access to Cloud and back office applications
- Engaging customer loyalty programs
- High-performance Guest Wi-Fi
- High-quality voice connections
- Engaging digital signage solutions
- Cost-effective online training programs

Hughes Managed LEO Satellite Service is available in select markets with enterprise quality of service and service level agreements.

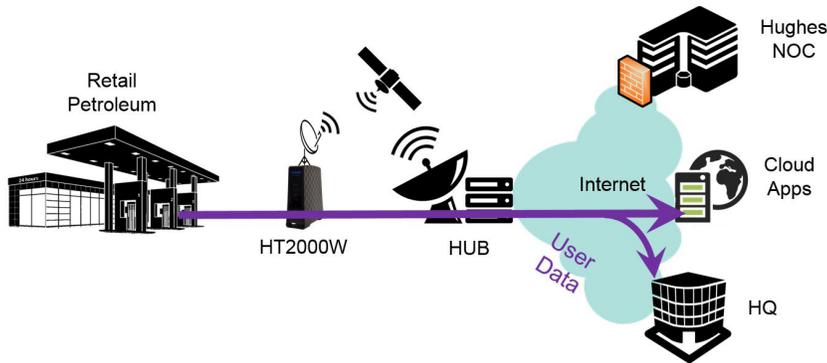

Hughes Managed GEO Satellite Service delivers:

- Fast speeds: 25 Mbps/3 Mbps across all service plans
- Generous data allowances: 35 to 250+ GB
- No hard data limits and no costly overage fees
- Available across the US coast-to-coast*
- Managed firewall built-in**
- Secure VPN access**
- Optional Hughes ActiveTechnologies™ for**:
 - Accelerated VPN throughput
 - High-quality, carrier-grade voice calls
 - Improved application and Cloud performance

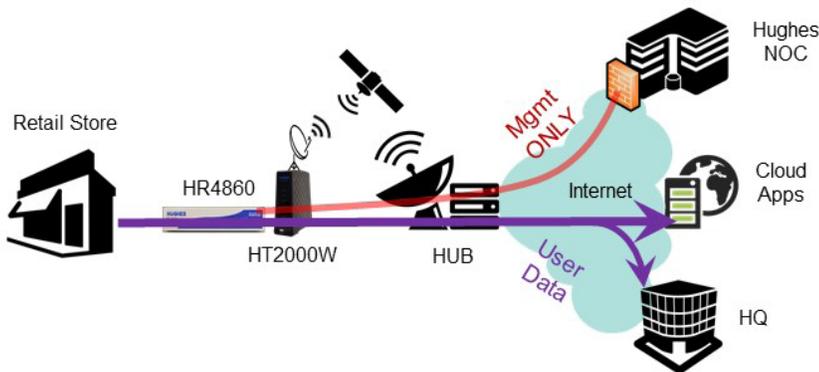

Unmatched Deployment Flexibility

Here are some examples of satellite deployment configurations.

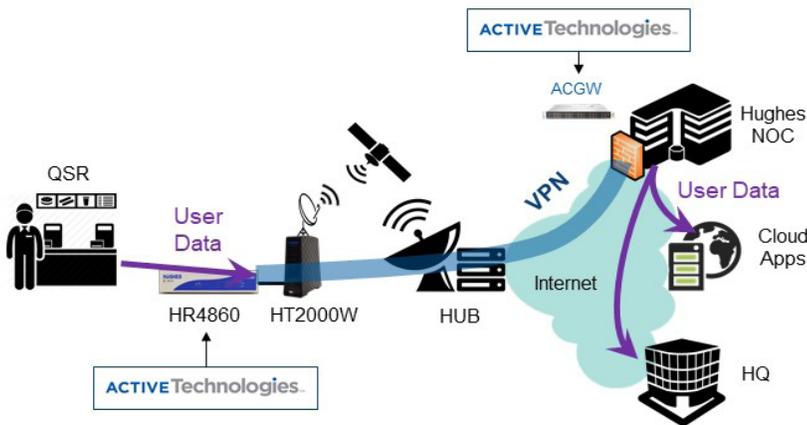

Open Internet Access

- Enjoy fast browsing and secure access (HTTPS) to your Cloud applications and back office applications at HQ
- Select your VPN appliance of choice

Split-Tunnel Access

- Enjoy fast browsing and secure access (HTTPS) to your Cloud applications
- Hughes HR4860 Branch Gateway provides VPN access to back office applications at HQ

ActiveTechnologies Enabled

- Enjoy fast browsing and secure access (HTTPS) to your Cloud applications
- Hughes HR4860 Branch Gateway provides VPN access to back office applications at HQ
- ActiveTechnologies** accelerates VPN for unmatched performance

* With clear view of the Southern Sky

** Depending upon configuration
