**Why Choose an MSSP?**

The global Managed Security Services Market size in terms of revenue was worth approximately **$27.7 billion** in 2022 and is poised to generate revenue around **$49.6 billion** by the end of 2027, projecting a CAGR of **12.3%**.

**Managed UTM** Includes:
- Content Filtering
- Vulnerability Management
- Network Access Control
- Remote Access
- Antivirus
- Managed Firewalls

**24/7/365 Monitoring & Support,** including a **24/7 Security Operations Center (SOC)**

Weekends and holidays are some of the most common times that cybercriminals choose to attack, since they know you might be short staffed.

**Threat Detection and Intelligence**
that can identify both known and emerging threats. MSSPs deploy advanced technologies and techniques to identify both known and emerging threats.

**Security Device Management**
Management and maintenance of security devices such as firewalls, intrusion detection and prevention systems, and antivirus solutions. MSSPs ensure these devices are properly configured, updated, and optimized.

**Standing up and maintaining your own SOC** can cost upwards of **2 Million dollars per year**.

**MSSPs provide incident response services to swiftly address and mitigate security breaches, minimizing potential damage.**

**MSSPs handle compliance and reporting,** helping organizations adhere to industry-specific regulations and standards by implementing security controls and practices.

There is a major skills shortage in the cybersecurity industry. Hiring an MSSP means you save time, money, and effort from training and maintaining additional cybersecurity staff.
