AT_IHACA: Automatic Context Activation

Description: Allows TE to configure Automatic PDP Context activation. Note that this command is used to configure ACA for TEs with Static IP addresses; the _IHINIT AT Command has an "ACA" parameter that shows the status of/controls the use of ACA for TEs with DHCP-assigned IP addresses. Note that the "ACA Always On" parameter MUST be provided as the last parameter for ACA Identifier 7 creation/modification ONLY (it is not needed/has no effect when used to create/modify ACA Identifiers 1 through 6); also note that the enabling of ACA Identifier 7 (for Always On ACA) will automatically force all Static ACA definitions (ACA Identifiers 1-6) as well as DHCP-based ACA (in _IHINIT) to become disabled. If ACA Identifier 7 is shown as enabled, the ACA Always On function is enabled, and vice-versa (there is no separate indicator). _IHACA is NOT supported when the UT is in NAPT Mode.
