

Hughes Network Systems is committed to setting the standard for excellence in our industry and earning the respect of our customers, competitors, and vendors. To achieve this, we are committed to identifying and complying with all legal and contractual compliance requirements, and to other voluntary obligations, including ISO 14001.

The foundation of that our environmental management system is built on is understanding the needs and expectations of all our stakeholders, environmental and sustainability issues, risks, and opportunities. Through establishing environmental objectives, targets, and monitoring our performance against them, we are committed to continually improving our systems to enhance our environmental performance

In designing and delivering products and services that consistently satisfy our customers' requirements and exceed their expectations, we take a whole life-cycle perspective and are committed to protecting our environment through carefully managing and reducing our environmental impact, including preventing pollution, reducing our carbon footprint, minimising waste, and working with our suppliers and subcontractors to meet our environmental requirements and policy commitments.

This environmental policy sets out our shared vision, is available to interested parties, and is reviewed annually by our business leaders.
